

1. Cut out the model, cutting along the solid black lines.

2. Score along the dashed lines using a ruler and something with a bit of a point, but don't cut all the way through.

3. Fold along the scored lines. Dashes = ridge fold. Dot and Dash = valley fold.

4. Glue together the marked elements (legs and hair).

5. Glue the remaining elements in number order. The last section with the hair can be a little fiddly so practice positioning it before you apply the glue.
